28. (cancelled)

29. (new) A server for connection to a client via a network; said client operable to transmit user-input to said server over said network and to receive user-output from said server over said network; said server comprising:

a network interface for connection to said network;

a processor coupled to said interface; said processor operable to remotely host execution of an application for said client; said application for receiving said user-input for said client from said network and for generating said user-output for transmission to said client over said network; said processor further operable to generate a universal printer file from said application based on an instruction embedded in said user-input; said processor further operable to transmit said universal printer file over said network.

- 30. (new) The server of claim 29 wherein said universal printer file is generated according to the Adobe Acrobat portable document format ("PDF").
- 31. (new) The server of claim 29 wherein said server and said client run cooperating versions of Citrix MetaFrame; and wherein said user-input, said user-output and said universal printer file are carried over said network via Citrix MetaFrame.
- 32. (new) The server of claim 29 wherein said network includes at least one of a local area network; a wide area network and the Internet.
- 33. (new) The server of claim 29 wherein said universal printer file is carried over said network to said client via email.
- 34. (new) The server of claim 29 wherein said universal printer file is transmitted to said client for printing at a printer locally connected to said client; said client operable to interpret said universal printer file for said printer via a universal print file reader in cooperation with a local printer driver complementary to said printer.
- 35. (new) The server of claim 34 wherein said universal printer file is generated according to the Adobe Acrobat portable document format ("PDF").
- 36. (new) The server of claim 35 wherein said universal print file reader is Adobe Acrobat Reader.
- 37.(new) A client-server computer system comprising:

a client operable to transmit user-input over a network and to receive user-output over said network;

a server connected to said client via said network; said server operable to remotely host execution of an application for said client; said application for receiving said user-input for said client from said network and for generating said user-output for transmission to said client over said network; said server further operable to generate a universal printer file from said application and to transmit said universal printer file to said client over said network;

said client further operable to receive said universal printer file, said client including a universal print file reader operable to interpret said universal printer file into a local printer file in cooperation with a local printer driver; and

a printer complementary to said local printer driver for connection to said client, said printer operable to print a document from said local printer file.

- 38. (new) The system of claim 37 wherein said universal printer file is generated according to the Adobe Acrobat portable document format ("PDF").
- 39. (new) The system of claim 37 wherein said server and said client run cooperating versions of Citrix MetaFrame; and said user-input; said user-output and said universal printer file are carried over said network via Citrix MetaFrame.
- 40. (new) The system of claim 37 wherein said network includes at least one of a local area network; a wide area network and the Internet.
- 41. (new) The system of claim 37 wherein said universal printer file is carried over said network to said client via email.
- 42. (new) A method of printing comprising:

receiving a print request at a server from a client remotely connected to said server via a network;

processing said print request at said server by corresponding said print request to an application hosted on said server on behalf of said client;

locating a universal printer driver on said server;

creating a universal printer file from said application using said universal printer driver; and,

sending said universal printer file over said network.

- 43. (new) The method of claim 42 wherein said universal printer file is generated according to the Adobe Acrobat portable document format ("PDF").
- 44. (new) The method of claim 42 wherein said server and said client run cooperating versions of Citrix MetaFrame; and said print request and said universal printer file are carried over said network via Citrix MetaFrame.
- 45. (new) The method of claim 42 wherein said network includes at least one of a local area network; a wide area network and the Internet.
- 46. (new) The method of claim 42 wherein said universal printer file is sent from said server over said network to said client via email.
- 47. (new) The method of claim 42 wherein said sending step includes transmitting said universal printer file to said client and said method further includes the steps of:

receiving said universal printer file at said client;

interpreting said universal printer file for a printer locally attached to said client; printing said interpreted universal printer file at a printer locally connected to said

client.

48. (new) The method of claim 42 wherein said universal printer file is generated according to the Adobe Acrobat portable document format ("PDF").
